LIMIT

“LIMIT” es un biombo de perfil de aluminio que permite dividir principalmente ambientes de trabajo, aunque su uso se extiende a otros espacios interiores en instalaciones comerciales o colectividad.

Su sistema de unión permite regular la apertura de grados necesaria para cada instalación. Las pantallas son de acero microperforado, policarbonato celular o laminado en color blanco, gris o negro. Una opción simple, funcional y económica de separación de espacios.

‘LIMIT’ is an excellent option in terms of design, price and functionality. A screen partition that is ideal for offices, sales points etc. In our 2010 catalogue you will find a new range of modular screening with an aluminium frame and a choice of micro-perforated steel, translucent polycarbonate, grey, white or black melamine panels. The system allows you to create different layouts, for call centres or private voting areas perhaps.

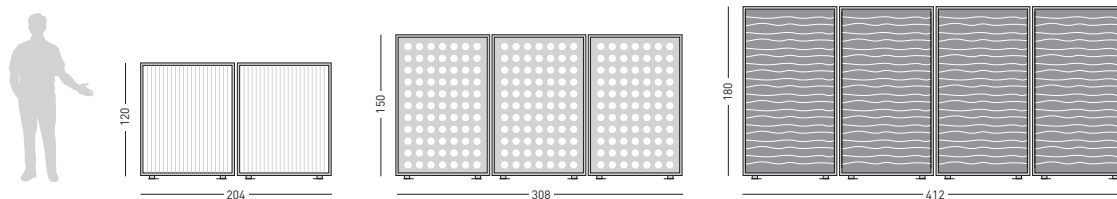

Mampara modular "Limit" fabricada con perfil de aluminio anodizado mate y pies trapezoidales metálicos pintados en gris. Su sistema de unión permite ser graduable y abrir y cerrar con la apertura de grados necesaria.

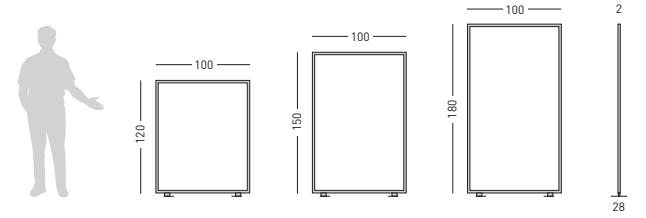

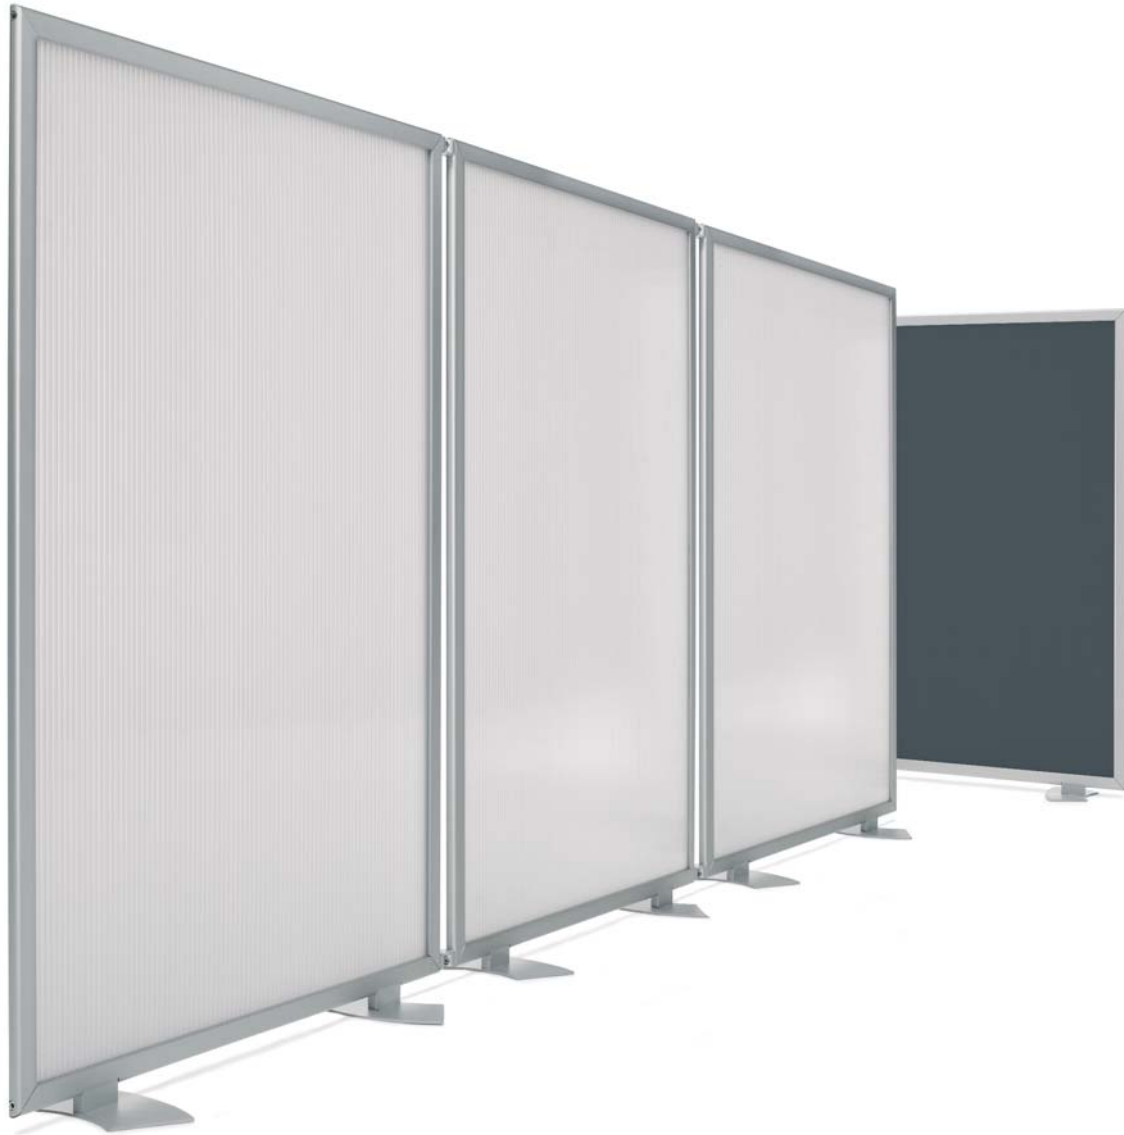

Modular partition with aluminium structure and metallic supports. Different layouts possible: in a line or in staggered rows... Panels in ribbed plexy, grey metal or black laminated in relief.
